MEMORANDUM FOR: Director of Materiel, DPS/DCI

SUBJECT : Portable Air Conditioner

25X1A

You no doubt remember my report upon my return from Detachment B that they feel an urgent requirement for a portable air conditioner that could pump cold air into the [REDACTED] cockpit during the interval prior to take off while the pilot is getting into the cockpit and when personal equipment is being connected and tested. I understand that this item had been requested through regular channels. Could you let me know what progress is being made in meeting this request?
